Ref: **GTCU CHEM PACK**

Chemicals pack description:

The start pack of Super Concentrate - EEC 1000 - RAW ingredient is built in a 1:4 concentration ratio (so, from each 1 litter of concentrate there are obtained 4 litters of working solution).

The initial quantity of 1.000 litters (contained into 1x IBC) is foreseen to last for an estimated period of 6-9 months of tank cleaning jobs.

The chemicals are having a dual potence:

A powerful harmless detergent, with a non-foaming formula (Gold classified by the North Sea QHSE standards)
A very reliable desemulsifier, which 'task'' is to break the bottom tank hard sediments/ heavy oily slops into a three phases solution (solids, water – approx. 70% of the whole quantity and the oily phase).
The water is fully recovered and continuously reused during the cleaning process.

NB: The shelf life of the raw non diluted product it is 2x years and, once diluted, 1x year.
